

AUTOMATIC DISPENSING STATION FOR JARS AND BOTTLES, DANA MATIC 2000+

Bruttopreis:
50 776 €

Nettopreis:
41 281 €

The automatic filling station consists of the DANA MATIC 2000+ filling module and an automatic turntable. The table consists of a steel top with a railing that divides the table into two sections: the feeding and unloading zone.

The DANA MATIC 2000+ is a filling machine with a gear pump. A powerful motor drives the gear pump via a planetary gear. The motor is computer-controlled. The filling (dosing) module has 20 filling programs with settings for weight, calibration factor and other parameters.

The machine works precisely and is easy to reprogram for a different quantity or product.

All parts in contact with the product are made of food-grade plastic or stainless steel, which can be easily separated and washed in a dishwasher.

The device is designed for dosing thick food products such as jams, preserves, creams, honey.

- Programs 20+
- Media temperature range (°C) max. 95°C
- Jar/bottle diameter: 30 - 115 mm

- Jar/bottle height: 30 - 190 mm
- Pumping capacity (l/h) 400 l/h
- Computer-controlled gear pump
- Connectors 1.5" BS thread and 2" hose connection
- Accuracy +/- 1 g
- Noise level <70 dB(A)
- Table capacity 48 jars
