

COMPLETE BOTTLING LINE FOR SMALL BOTTLES, E-FILL SW

Automatic monoblock for filling, capping and labelling. The E-Fill SW Monoblock by CDA has been designed to ensure maximum efficiency and versatility in a fully automatic bottling line.

The SW version allows you to fill, cap and label bottles (e-liquid, essential oils, aromas, dyes, reagents...) from 5 to 250 ml in various formats.

It has 2 operating modes:

- fully automatic for large product series with the Pick & Place system for automatic cap positioning and capping,
- semi-automatic mode for packaging small and medium series of complementary products with manual cap dispensing on the bottle and automatic capping. The semi-automatic mode allows bottling other product formats without the need for complicated handling or adjustments.

The machine's operating speed can reach up to 3000 bottles/hour, i.e. 50 products/minute (for 10 ml bottles) and can be equipped with up to 2 labelling stations. It can also be equipped with a marking system on the label or on the bottom of the bottles (optional).

The E-Fill SW monoblock is designed for many sectors of activity:

- food industry (flavourings, food colourings...),
- e-liquid (Chubby bottles...),
- parapharmaceuticals (reagents...),
- CBD,
- cosmetics,
- essential oils...
