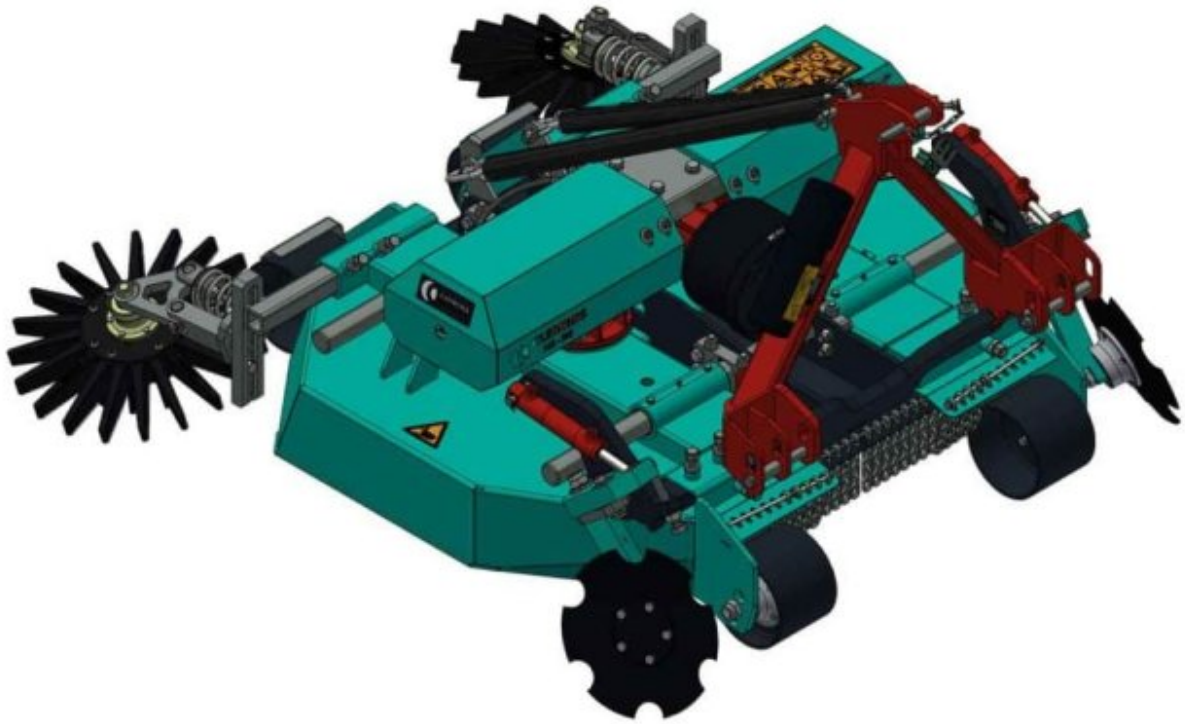
MULCHER



The variable mulcher for wine and fruit growing works excellently in vegetation management and is also suitable for shredding vine cuttings. It is driven by a 540 rpm PTO and a factory supplied cardan shaft with slip clutch. A double-acting control unit is required for hydraulic width adjustment. The two rotating blade carriers, each equipped with two freely movable blades, guarantee a high mulching speed with low power requirement. The cutting height is adjusted at the front by large adjustable support wheels and at the rear by a continuously adjustable roller. This guarantees the best running characteristics, even on uneven terrain. Maintenance-friendly due to few lubrication and oiling points and low-wear blades.
