

NOVOX®-CP STAINLESS STEEL PLATE & FRAME FILTER

The NOVOX®-CP is a high precision stainless steel plate & frame filter, designed and built for hygienically critical, high-value applications. The unique design of the NOVOX®-CP allows efficient handling without the need for gaskets in the filter stack – inlet/outlet tubes are formed within the stack itself, sealed by the filter sheets. This feature makes the cleaning procedure much easier and eliminates the need for gasket removal or replacement. High precision construction of the plate & frame assembly and the hydraulic closing mechanism, combined with high-performance FILTROX filter sheets, make this system almost free of any drip-loss.
