

PUMP-OVER FERMENTER "WINEFICATOR" VIK LETINA

The "Wineficator" is a pump-over fermenter designed to make remontage easy.

The HELI rotating sprinkler evenly soaks the pomace cap in the tank, while a built-in sieve separates the solid substance from the liquid.

Several options are available to fully automate the entire process:

- Pneumatic devices send bubbles from the bottom of the tank, delicately agitating and mixing the liquid.
- Rotating paddles at the bottom of the pump-over wine fermentation tank are activated to fully unload the pomace from the vessel.
- A programmable, touchscreen control panel serves as a temperature and pump regulator.

The large, dimpled jacket makes sure the temperature inside the pump-over fermenter is always optimal. Thanks to the vertical construction of the cooling jacket, the stored liquids will be efficiently chilled even if the tank is not full to the brim.

Durable, high-quality materials enable the wine fermentation tank to stay in pristine condition, even after years of professional usage.
