

VINPILOT TANK CONTROLLER ONE

The VinPilot® tank controller offers excellent fermentation control thanks to completely reliable temperature control.

You can use the VinPilot® controller for cooling, cooling and heating, and even perform operations with automatic switching between cooling and heating using a 3-way valve.

The diagram illustrates the VINPILOT® PRO installation architecture. A central network hub is connected to a laptop, a smartphone, and a tablet. The hub is also connected to three energy storage units (batteries) via a network cable. Each battery unit is connected to a power source and a load. The diagram shows the flow of data and power between the central hub and the various components.
